

Sprint 1 Report

OneApp

Team OneApp

10/23/17

Nathan Phan, Manav Sharma, Yona Edell, Hesham A'Ssabahi

ACTIONS TO STOP DOING: As of the end of this sprint, the team is satisfied with how the process is proceeding. Scrum meetings are efficient and punctual, tasks are picked up, and everyone's communication is on par.

ACTIONS TO START DOING: We need to start doing group work sessions as it is better to collaborate as a team when it comes to learning new technologies like the MEAN stack. This is very new to us and it would be best if we are all on the same page of understanding when it comes to this application.

ACTIONS TO KEEP DOING: Keep up the work ethic and we should continuously meet our sprint goals this quarter. Continue to pick up tasks as previous ones are finished. Everyone is coming to meetings on time and our meetings are going over well.

WORK COMPLETED/NOT COMPLETED: There were three user stories for this sprint:

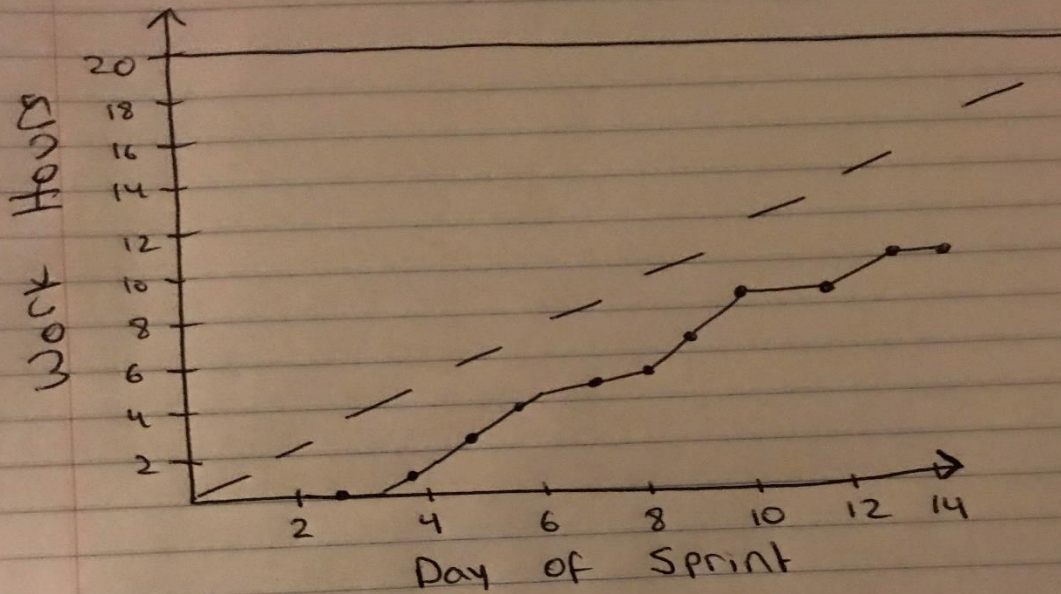

- As a user I want to be able to register an account so that I don't have to continuously reauthorize my social media accounts.
- As a user I want to be able to log in to my account so that I can re-access my saved social media accounts.
- As a developer I want to be able to use the MEAN stack comfortably so I can develop our app successfully.

All user stories were successfully completed (to each their own on the third user story as the videos gave as much as you took out of them).

WORK COMPLETION RATE:

The number of user stories completed was three out of three. There was a total of 14 days in this sprint, which comes out to about 0.21 user stories per day. The estimated number of ideal works hours was 20. We finished in about 11 hours.
